SAIBABA KOLA

+91 6309075370 | Email : k.saibaba2022@gmail.com | Git-Hub | Portfolio

Career Objective:

Motivated and detail-oriented Cloud Engineer with a strong foundation in Linux, CI/CD pipelines, Cloud computing, and automation tools. Familiar with DevOps methodologies, Software Development Life Cycle (SDLC), version control using Git, and containerization technologies. Hands-on experience with Docker, Ansible, and Linux environments through academic projects and self-learning. Eager to contribute to infrastructure automation, application deployment, monitoring, and continuous improvement initiatives while expanding expertise in modern DevOps practices.

Technical skills:

- **Microsoft Basic Software** : MS office
- **Cloud platform** : Micro Soft Azure, AWS
- **Infrastructure and Configuration** : Terraform, Ansible
- **Version Control** : Git, GitHub
- **Containerization and Orchestration** : Docker, Kubernetes
- **Monitoring and Visualization Tools** : Azure Monitor, Prometheus, Grafana
- **CICD** : Azure Dev Ops, Git hub Actions, Jenkins
- **Security Tools** : Sonarcube, Trivy, CheckOV
- **Basics of Networking** : OSI Layers, Protocols, Ports, Networking functions

Professional Experience:

- **Company :** Great Mind IT Solutions Pvt. Limited | Cloud Engineer May 2026 – Present
- **Tech Stalk :** AWS, Azure, Terraform, Git, Github, Docker, K8s, Prometheus, Linux, CICD
- **Description :** Supporting cloud infrastructure, application deployment, and CI/CD automation using AWS, Azure, Linux, Docker, and Kubernetes under senior guidance, with a focus on implementation and troubleshooting.
- **Responsibilities :**
  - Managed cloud infrastructure using **AWS** and **Microsoft Azure**, including virtual machine provisioning, **network**ing, **storage** configuration, and **Linux** administration.
  - Worked on application containerization using **Docker**, including building images, managing containers, and preparing applications for deployment.
  - Implemented **Kubernetes** concepts for container orchestration, including pod management, deployments, services, scaling, and application availability.
  - Configured and maintained CI/CD pipelines using **Jenkins**, **GitHub Actions**, and **Azure DevOps** to automate application build, testing, and deployment workflows.
  - Performed infrastructure troubleshooting, deployment validation, and technical documentation to support reliable cloud operations and application delivery.

Project:

1. Title : AI-Powered Multi-Cloud Application Deployment & Monitoring

- **Tech Stack :** Cloud (AWS Elastic Beanstalk, Azure App Service), Python (Flask, Gunicorn), Docker, GitHub Actions, Git, GitHub, Prometheus, Grafana
- **AI**: AI Agent for application health validation and deployment verification
- **Description :** Developed and deployed a Python Flask application on AWS Elastic Beanstalk and Azure App Service using CI/CD pipelines. Integrated an AI monitoring agent with Prometheus and Grafana to automate health checks, monitor performance, and provide real-time application insights across both cloud platforms.

- **Roles & Responsibilities**
  - Developed and deployed a Python Flask application on AWS Elastic Beanstalk and Azure App Service using Docker and automated GitHub Actions CI/CD pipelines.
  - Integrated an AI-based monitoring agent to automate application health checks, deployment validation, and issue detection.
  - Implemented Prometheus for metrics collection and built Grafana dashboards for real-time monitoring, visualization, and performance analysis.
  - Monitored application availability, resource utilization, and system health while troubleshooting deployment, infrastructure, and application-related issues.
  - Managed source code using Git/GitHub and ensured reliable, highly available deployments with continuous monitoring across multi-cloud environments.

2. Title : Website Hosting Using Micro Services With DB

- **Tools :** MS Azure / AWS, Docker (Networks and volumes)
- **Responsibility :**
  - Created Azure / AWS, installed Docker, and configured custom bridge network and volume.
  - Deployed multi-tier architecture (Web, App, DB) containers with internal communication and persistent storage.
  - Hosted web application with successful data insertion and retrieval.
  - Implemented Azure Load Balancer for traffic distribution and configured Firewall/NSG for security.
  - Successfully delivered a secure and scalable containerized application on Azure infrastructure.

3. Title : Cloud-Native Student Application Platform using Flask and MySQL

- **Tools :** Microsoft Azure/ AWS, Terraform, Python (Flask), MySQL, GitHub
- **Description :** Built and deployed a 2-tier student management system using Flask and MySQL with multiple approaches including Terraform
- **Responsibilities:**
  - Designed and deployed Azure infrastructure using Terraform (IaC)
  - Developed backend using Flask and integrated MySQL database
  - Implemented multiple deployment strategies: Terraform CLI, Git-based workflow
  - Managed environment variables securely (no hardcoded secrets)
  - Tested, troubleshot, and documented deployment processes

Technical Certifications:

- Course completion certificate in “Computer Networking ” from “Skill Konnect ”.
- Course completion certificate in “Multi Cloud Dev Sec Ops” at “V-Cube Software Pvt Solutions”.

Educational Qualification:

- B-Tech in ECE at CMR College of Engineering and Technology, CGPA :7.0 2018 – 22

Achievements:

- Participated at ASCII (American Standard Code for Information Interchange) presented project “Automatic Parking Slot Indicator” in 2021.
- Presented and published article on project “Automatic Parking Slot Indicator” by AIP (American Institute of Physics) Publishers.
